

The **IKI-55** Feeder Control Unit can be used in load switchgear for directional fault detection, load flow measurement, and control of load and ground switches. Likewise, a number of automation and monitoring functions are available with the **IKI-55**. The **IKI-55** is network-capable in its basic version and can communicate with the control station and other remote stations via various communication protocols. It can also be used as a Modbus master. The **IKI-55 M** is a Modbus-only variant.

In addition to the functions of the **IKI-55**, the **IKI-55 PQ** offers the possibility to monitor voltage measured values for **power quality (PQ)**. Based on DIN EN 50160, the following measured values are evaluated and reported: Frequency, voltage dips, voltage swells, voltage interruptions and fast voltage changes, each according to IEC 61000-4-30.

Properties

The **IKI-55** is designed for the connection of small-signal current transformers according to IEC 61869-10 as well as small-signal voltage transformers according to IEC 61869-11. In conjunction with a **sensor adapter**, conventional conversion transformers for current measurement as well as capacitive and precision dividers can be connected.

Fault detection

- Directional short-circuit detection
- Directional ground short-circuit detection
- Directional ground fault detection with static and transient fault detection
- Ground fault detection via pulse locating
- Suitable for all neutral point treatments
- No summing transformer required
- Fault recording with export as Comtrade file

Early fault detection

- Detection of transient faults (Intermittent ground faults)
- In conjunction with a CAPDIS- S2_55 (R5): Detection of partial discharges and their frequency and trend

Load flow measurement

- Voltages, currents, powers, frequencies, cos phi
- Momentary and average values
- Cross calibration (With additional adapter)
- Phase comparison function for voltages (With additional adapter)

Comprehensive control and monitoring functions

- Control of motor controllers for switching load and ground switches
- Free programmable logic functions
- Automatic Transfer Switch (ATS)
- Limit value monitoring

Simple operation of the unit

- Additional LEDs to indicate the fault direction
- Self-explanatory operation via direction keys

Extended safety features

- User roles safety concept, password protected
- Remote firmware update via REST interface (deactivable)
- USB interface deactivable

Communication protocols

- IEC 60870-5-104 for communication with control center
- MQTT, REST for communication with databases or management systems
- Modbus RTU (Master)

Power-Quality

- Monitoring of voltage quality according DIN EN 50160 and IEC 61000-4-30:2016-01(Frequency, voltage dips, voltage swells, voltage interruptions, rapid voltage changes)

Technical Data

Device data

Article number	2502400_H004
Quantity unit	Piece
Product designation	Grid-Controller IKI-55 PQ Networkable Feeder Control Unit Power-Quality
Number of feeders	1

Device data

Firmware	1.3.0
Parameterization software	KriesConfig
Configuration	Via HMI and display (limited), Via software Kries-Config (download at kries.com)
Firmware update	Remote via network interface

Operating elements and display

Front display	LC-Display and LEDs
Direction keys	1 - 4 for navigation in menu
Red LED (1)	Error event detected
Yellow LED (2)	Device warnings
Green LED (3)	Status message device state
Yellow LED (4)	Fault detected in the direction of the busbar
Red LED (5)	Error event detected in the direction of the cable

Dimensions and installation instructions

Case height x width x depth	48 x 96 x 110 mm
Cutout height x width	45 x 92 mm
Norm cutout dimensions	DIN IEC 61554:2002-08
Installation type	Panel mounting

Operating conditions

Operating temperature	-40°C ... 70°C
Storage temperature	-40°C ... 80°C
Protection class front side	IP54
Protection class	IP40 / Front IP54
System frequency	50 Hz / 60 Hz (selectable)

Fault detection and failure forecast

Fault detection	Individually selectable, any combinations possible
Star point types	Short-term low-ohmic terminated neutral, Low-ohmic terminated neutral, Inductive terminated neutral, Isolated neutral

Digital Inputs	6
Digital inputs - connections	Push-In, Connection of solid and stranded conductors: 0.08 to 0.5 mm ² Connection of stranded conductors with ferrule: 0.25 to 0.34 mm ²
Digital inputs - switching thresholds	ON > 19 VDC / OFF < 10 VDC
Digital inputs - voltage ranges	24 DC to 60 VDC
Digital inputs - current consumption	Max. 6 mA
Digital Outputs	6
Digital outputs for 1.5 pole switching	2
Digital outputs - connections	Push-In, Connection of solid and stranded conductors: 0.08 to 0.5 mm ² Connection of stranded conductors with ferrule: 0.25 to 0.34 mm ²
Digital outputs - variants	Floating
Digital outputs - switching capacity	1 A at 30 VDC
Digital outputs - dielectric strength	Max. 80V
Voltage input Input impedance	2 MOhm, 50 pF
Voltage input Input range	0,4 V – 4,1 V
Voltage input measurement accuracy	1%
Voltage input transformation ratio	10000:1 (settable)
Voltage input standard	IEC 61869-11
Current input Version	Rogowski current sensor
Current input Input impedance	10 MOhm, 50 pF
Current input Measuring range	0,1 A up to 2000 A
Current input Measuring accuracy	1%, +- 0.5 A
Current input Ratio	50 A / 22,5 mV (50Hz) (settable)
Current input standard	IEC 61869-10
Voltage inputs	1 (With additional adapter 2: 2x LRM/CAPDIS or 1x LRM/CADPIS + 1x precision 3.25V)
